

NETSECURE

BEI NETSECURE

BEI NetSecure provides the blueprint for and the implementation of the deepest level of network security ~ imperative for your Internet-dependent infrastructure. BEI NetSecure professionals utilize their unique and broad expertise with a wide array of state-of-the-art security technologies and tools to perform comprehensive network security audits and design and deliver customized security platforms.

Network security today requires an elevated level of security and places constant demands on you. In order to protect your company, you must constantly monitor network security information to be able to anticipate the ever-evolving barrage of threats against your network and the leading network security responses available. And, you must define your security policies, implement security technologies and be ever vigilant of your network through regular network audits.

Hackers, application vulnerabilities, tunneling, ping storms and denial-of-service attacks compromise the minimal level of security provided by firewalls and VPNs. Today's networks require an advanced level of security.

BEI NetSecure provides that advanced level, while customizing the degrees of security to each client's specifications. We believe there are three general components to a fully secured network, which we provide through NetSecure:

YOUR SECURITY POLICY

defines the security goals of your network; may include:

- > Intrusion protection
- > Eavesdropping prevention
- > Spoofing determination
- > Specific levels of router access list configurations
- > Tighter firewall configuration policies
- > Password policies
- > Sniffer monitoring and reporting
- > Enhanced utilization of existing security tools
- > Centralized security administration
- > Encryption and de-encryption technologies

IMPLEMENTATION OF RECOMMENDED NETWORK SECURITY TECHNOLOGIES

a truly secured network infrastructure is comprehensive and layered, utilizing a variety of technologies to ensure you are defended against multiple points of attack

AUDITS OF YOUR NETWORK

regular audits ensure proper enforcement of your policy and detect discrepancies that occur as your network evolves

BEI NetSecure safeguards your network infrastructure, via our signature blueprint service, technology implementations and managed audits.
